11. The present-day philosophy on using tree dressing or wood paint is:
 - a) It should be applied to all cuts over two (2) inches in diameter
 - b) It is an effective control agent against infection
 - c) It should seldom be used
12. All cuts back to a lateral branch should:
 - a) Be cut just outside and parallel to the branch collar
 - b) Be cut at a right angle to the branch collar
 - c) Leave a small stub at least four (4) inches
 - d) All of the above
13. When cutting a main branch back to a lateral branch, the cuts must be made:
 - a) At a right angle to the branch collar
 - b) The nearest suck growth
 - c) Back to a branch at least 3 times the diameter of the branch removed
14. At present, the best way to treat a large tree cavity is to:
 - a) Let the tree handle the situation itself
 - b) Fill in the cavity with concrete
 - c) Scrape dead wood down to expose live wood and paint the wound.
15. When disinfecting pruning tools to prevent the spread of disease, such as fire blight; which of the following is acceptable?
 - a) Clorox and water
 - b) Alcohol
 - c) Lysol Spray
 - d) All of the above
16. The professional practice when working on a large declining tree is:
 - a) Stub back large branches to encourage new growth
 - b) Prune back dead branches to any live green growth
 - c) Talk to the homeowner and encourage complete removal
17. It is acceptable to use climbing spikes:
 - a) Only on removals
 - b) Only on thick bark trees
 - c) Never
 - d) Only when access by a bucket truck is not possible

18. The over-all height of a tree can be acceptably reduced by a process known as:
 - a) Drop crouching
 - b) Topping
 - c) Pollarding
 - d) Height can never be reduced
19. Topping is an acceptable practice when:
 - a) Topping is never an acceptable practice
 - b) When requested by the homeowner
 - c) The canopy of the tree is too large
 - d) None of the above
20. Trees fight disease and/or injury through a process known as:
 - a) Compartmentalization
 - b) Therapeutic response
 - c) Trees have no ability to fight disease and/or injury
 - d) None of the above
21. Energy used to fight disease and/or injury comes from:
 - a) Currently produced energy
 - b) Stored energy
 - c) Borrowed energy
 - d) Compartmentalized energy
22. Most of the diseases in trees and shrubs in Wyoming are the result of:
 - a) Biotic pathogens
 - b) Poor soils
 - c) Temperature extremes
 - d) Environmental stresses
23. Trees primarily store energy in:
 - a) The sap
 - b) The cambium layer
 - c) The roots
 - d) The wood
24. Pruning of newly transplanted trees will result in:
 - a) An increase in energy available to the trees
 - b) A decrease in energy available to the trees
 - c) No change in available energy

Mayor: Brandon Graves

Council: Alan Madsen – Bill Britz – Don Race – Tony Montoya

Town of Wheatland

25. Generally speaking, which type of trees are the most prone to disease:
- a) Rapidly growing species
 - b) Slowly growing species
 - c) Moderately growing species
26. Sudden and severe reduction in a tree's canopy can result in:
- a) Loss of stored energy
 - b) Reduced root growth
 - c) Reduced ability to fight disease
 - d) All of the above
27. Crown reduction is an acceptable pruning technique when:
- a) You need the money for a truck payment
 - b) Dead, hazardous, or diseased limbs are presented
 - c) The tree is over sixty (60) feet tall
 - d) The tree is over sixty-five (65) feet tall
28. Which tree below has the poorest ability to fight disease and/or injury?
- a) Bur Oak
 - b) Linden
 - c) Black Walnut
 - d) Cottonwood
29. Large scaffold branches:
- a) If pruned out should be limited to no more than one per year
 - b) Are useful in developing good trunk girth and taper
 - c) Should be left alone if possible
 - d) All of the above
30. How many cuts are necessary to remove a large limb?
- a) One
 - b) Two
 - c) Three
 - d) Four
